FIELD TESTED, LIGHTER AND EASIER TO INSTALL

Green Post™ double layer wrap is a factory applied heat seal to the lumber, delivered ready to install with uplift restraint system.

UNDERSTANDING DECAY

The area 2" above the ground to 16" below the soil-line is the most vulnerable area for post decay to occur because high moisture content combined with available oxygen and soil nutrients are most favorable for biological growth.

PROVIDING ENVIRONMENTAL FRIENDLY SOLUTIONS FOR:

- Pole Building Posts
- Deck Posts
- Sign Posts
- Mailbox Posts
- Pavilion Posts
- Fence Posts
- Agricultural Posts
- Light Posts
